

ELECTRICAL SYSTEM

The map for the electrical lines and receptacles is in the OPM.

The main breaker boxes are mounted on a pole at the NE corner of the Garden.

The irrigation system has its own, smaller box on this pole, labelled with the brand name, "Hunter". The irrigation timer will not work unless its breaker is set to 'on'. It is turned off each Fall.

Another box is mounted on the lakeside end of the Faux Wall, near the Lily Ponds.

Malfunctioning receptacles should be reported to a Board member.

All repairs or alterations need to be done by a professional electrician and reported to the VND through the SLGS/VND liaison.

See diagram for identifying electrical panel boxes and their functions.
